

NIZAR ILAHI

Senior Full-Stack Engineer | Java / Spring Boot & React / Node.js / NestJS

Address: Walsroder Str. 143, 30853 Langenhagen, Germany
Nationality: Tunisian | **Phone:** +49 1590 6349955 | **Email:** nizar.ilahi@gmail.com
Portfolio | GitHub | LinkedIn
Unrestricted work permit for Germany, available immediately

PROFESSIONAL PROFILE

I'm a **Senior Full-Stack Engineer** with over 15 years of experience building scalable web applications, from the database layer through to production on GKE. My focus areas are **Java 17+ / Spring Boot 3.x** (REST APIs, Spring Security, JWT/OAuth2), with **React 19** on the frontend and **Node.js** using **Express** and **NestJS** on the backend, all in TypeScript. I also work with resilient microservices (Resilience4j, Kafka/RabbitMQ), test automation and observability through the **LGTM stack**. AI tools like **Claude Code**, **Cursor** and **Gemini** are part of my daily workflow, most recently while building a microservices platform for **Octobank** (octobank.uz), a licensed digital bank in Uzbekistan, and a live booking platform (allezgoo.com).

CORE COMPETENCIES

- | | | |
|--------------------------|----------------------------|-----------------------|
| Scalable REST APIs | Auth (JWT/OAuth2) | Microservices |
| React 19 + TypeScript | Node.js / Express / NestJS | Java 17 / Spring Boot |
| Kubernetes / GKE & CI/CD | Observability (LGTM) | TDD & Test Automation |

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Engineer & System Architect

Langenhagen, Germany | January 2026 - present

- Octobank (octobank.uz), fintech ecosystem in Uzbekistan:** Designed a cloud-native microservices architecture on Java 17 and Spring Boot 3.x, with resilience patterns (Resilience4j), event-driven communication via Kafka and end-to-end tracing through the LGTM stack (Loki, Grafana, Tempo). Deployed on GKE.
- AllezGoo, live booking platform (allezgoo.com):** Designed a scalable full-stack booking platform with React 19 and NestJS. Optimizing the core booking workflows lifted the conversion rate by 20 %.
- Clinic Booking Appointments API:** Scalable RESTful backend built with Node.js, Express 5 and Prisma 7 on PostgreSQL, with JWT authentication, role-based access control, Zod validation and automated email reminders.
- German course:** Full-time intensive course since February 2026. Reached A2 in under five months and I'm now working toward B1, reading German-language technical material and listening to tech podcasts along the way.

Full-Stack Web Developer | NACHD-IT

Sousse, Tunisia | June 2019 - December 2025

- Delivered several products end to end: React with TypeScript on the frontend and, on the backend, both Node.js/Express and NestJS depending on the project, with modular REST APIs, DTO validation (class-validator) and database access via TypeORM and Prisma on PostgreSQL.
- Built scalable REST APIs with **Java 17 / Spring Boot 3.x** along with secure authentication and authorization (Spring Security, JWT/OAuth2, role-based access control). Reported security incidents dropped by 90 % across more than 50,000 users as a result.
- Cut frontend load times by 30 % by migrating to React Server Components and moving state management to TanStack Query.
- Improved data integrity through performance tuning of complex MySQL/PostgreSQL queries and the design of highly available database schemas.
- Set up **CI/CD pipelines** (GitHub Actions) and automated test suites (JUnit/Mockito, Jest, over 80 % coverage), containerized applications with Docker/Kubernetes, wrote OpenAPI/Swagger documentation, and ran regular code reviews within an agile Scrum team.

Computer Science Lecturer | University of Kairouan

Kairouan, Tunisia | June 2011 - November 2024 (part-time)

- Independently designed and taught courses on frontend frameworks (React, Angular), web development (HTML5, CSS3, JavaScript ES6+, TypeScript), the Spring Framework and cloud fundamentals.
- Taught and mentored more than 100 students through project-based work and code reviews. Many now work in the software industry.

Web Developer | Best Engineering

Sousse, Tunisia | February 2008 - September 2009

- Automated internal call-center workflows and digitized B2B processes. Processing times fell by 35 % as a result.

EDUCATION

Master's in Business Intelligence (3rd cycle)

ISIG, University of Kairouan, Tunisia | Graduated: 2013 | Focus: data-driven backend architectures, business intelligence, data modeling

Master's in Applied Computer Science

ISSAT, University of Sousse, Tunisia | Graduated: 2007 | Focus: software engineering, object-oriented system architecture, software quality

TECHNICAL SKILLS

- Backend:** Java 17+, Spring Boot 3.x, Spring Security, Resilience4j, Kafka, RabbitMQ, NestJS, Node.js, Express.js, REST & GraphQL APIs
- Frontend:** React 19, TypeScript, Next.js, Redux Toolkit, TanStack Query, Zustand, Tailwind CSS, HTML5, CSS3/Sass
- Databases:** PostgreSQL, MySQL, MongoDB, Redis, TypeORM, Prisma, query optimization
- Testing:** Jest, Vitest, React Testing Library, Cypress, MSW, JUnit, Mockito
- Cloud/DevOps:** Docker, Kubernetes, GKE, Helm, GitHub Actions (CI/CD), AWS, Git, Linux
- Observability:** LGTM stack (Loki, Grafana, Tempo, Mimir), Prometheus, distributed tracing
- AI Tools:** Claude Code, Cursor, GitHub Copilot, Gemini
- Standards:** Clean Architecture, Microservices, TDD, OpenAPI/Swagger, UML, Scrum/Kanban

SELECTED PROJECTS

ClinAnnotate | Clinical audio annotation platform for IKIM Essen [\(github.com/nizar-ing\)](#)

Full-stack annotation workbench built for the Institute for AI in Medicine (IKIM), University Hospital Essen. It turns machine-generated transcripts of German clinical dictations into a gold-standard training dataset. Node.js 22, TypeScript and Express 5 power a domain-driven API on PostgreSQL via Prisma, with a Vue 3 frontend for keyboard-driven annotation across six clinical span types. Also handles multi-format audio ingestion and JSONL export with word-error-rate metrics.

Octobank | Cloud-native digital banking platform [\(octobank.uz\)](#)

Kafka serves as the event backbone for ordered streaming and auditable trails needed for fintech compliance. Resilience4j circuit breakers isolate cascading failures between the payment, account and notification services, and the LGTM stack provides end-to-end tracing. Zero-downtime deployment on GKE via Helm (Java 17 / Spring Boot 3.x).

AllezGoo | Live booking platform [\(allezgoo.com\)](#)

Full-stack travel platform built with React 19 and NestJS. React 19's concurrent features keep the UI responsive during parallel booking requests, and the modular NestJS architecture lets the core services, search, payment and notifications, scale independently. Re-engineering the booking workflows raised the conversion rate by 20 %.

Clean DDD E-Commerce API, teaching project [\(github.com/nizar-ing\)](#)

A REST API I built to show students how to structure a NestJS backend around Domain-Driven Design and Clean Architecture. Commands and queries are separated with NestJS CQRS, the domain layer stays independent of the framework, and persistence runs through Drizzle ORM on PostgreSQL with class-validator handling request validation. Jest covers both unit and end-to-end tests.

Clinic Booking Appointments API [\(github.com/nizar-ing\)](#)

REST API for medical appointment booking, built with Node.js, Express 5, Prisma 7 and PostgreSQL. JWT authentication with role-based access control (patient/admin), collision-free slot booking through unique database constraints, and security hardening with Helmet, rate limiting and CORS.
